Version History [edit] AutoCAD was originally designed for use as a drafting software package for design professionals working in a limited number of disciplines. While AutoCAD has since been commercialized for a much wider audience, some features of the original AutoCAD were initially designed for a more restricted market. For example, AutoCAD's input methods and editing workbook conventions are designed to be easier for novice users, but have changed significantly with each new release since the introduction of AutoCAD. On February 27, 2004, Autodesk introduced a different pricing structure for AutoCAD, splitting the application into a new version, AutoCAD 2004, and a new licensing structure called AutoCAD LT.[1][2] Basic functionality has been protected under copyright since the introduction of AutoCAD. Contents [edit] Programming API [edit] AutoCAD and AutoCAD LT are based on the same programming API, however there are notable differences between the APIs. AutoCAD LT uses an earlier API; all parameters are passed by reference. AutoCAD requires arguments to be passed by value, which means a copy of the value must be created and passed to the AutoCAD API, with the risk of the original value being changed. In AutoCAD LT, commands are not 'turned on' and 'turned off'; they're merely enabled. 'Turning on' and 'turning off' a command is done through the OPTIONMENU command, which also enables/disables the command for you. In AutoCAD, turning a command on and off is done by setting its Active property to TRUE/FALSE. AutoCAD LT [edit] AutoCAD LT has two major programming interfaces, the older Graphic and Raster Programming Interface and the newer Graphic and Vector Programming Interface. The Graphic and Raster Programming Interface was initially released with AutoCAD LT 2009, and was officially discontinued in AutoCAD LT 2010. The Graphic and Vector Programming Interface was initially released with AutoCAD LT 2011. The Graphic and Vector Programming Interface is still used with AutoCAD LT 2017. In AutoCAD LT, the various drawing modes, object styles, and color attributes are stored in variables or properties, and it is possible to display the properties directly on the user interface. In AutoCAD, there is no concept of user-defined styles or attributes,

AutoCAD 2017 introduced support for the Web Drawing Exchange Format (WDX) and the Web Drawing Interchange Format (WDI). The WDX format is identical to the DXF format, and support for WDX was added to AutoCAD 2017 with the release of add-on software from Autodesk. The Basic Data Exchange (BASE) file format is an XML-based file format that replaced the ASCII-based DWG format. It also allows exchanging data with other BIM modeling and drawing software such as Autocad 360. The native capabilities of AutoCAD can be extended using a plugin architecture. In May 2012, a customer desiring integration with a Windows-based CADD workbench was able to add real-time collaboration capabilities to a large production shop using the ARCADES collaboration software. Ports AutoCAD supports the output of 2D and 3D objects to a wide variety of output formats, including: 2D bitmap (BMP, JPEG, PNG, TIF, WMF), 3D bitmap (AMF, BMP, JPG, JP2, JPEG, JPG, MIF, MNG, MTI, NEF, PNG, JPEG, RAW, TIF, VRT), AutoCAD models (DWG, DXF), Import/export of other CAD formats, including DXF and DWG, Text (ASCII, RTF, TXT, DOC, WORD, PPT), AutoCAD Extras (ACS, ASR, BMP, BMP', BMPX, ETC, ETC2, GIF, PIC, PLD, PICT, JPEG, PPM, PS, PNG, PPM2, RLE, RTF, TIF, TIFF, TIFFTAGS, TIFF6, TIFF6a, TIFF8, BMP', CUR, CURF, EXE, EMF, EMF2, EPS, ETC, ETC2, FNT, FLAC, FITS, FITS2, FRA, GIF, JP2, JPG, JPEG, JPEG2, LBM, LBM2, LZW, PS, PS2, PIC, PICT, PIC2, PCX, PNM, PNM2, PPM, PPM2, PPT, RLE, RTF, TIFF, T a1d647c40b

We know in our hearts that we have a higher purpose on earth. We may not have grasped the intricacies of our position in the Universe, or who we are as individuals, but we have a glimmering in our mind of that which is beyond us, and we strive to make it manifest to ourselves and our fellow man. We are the eternal, the eternal now, existing beyond the limitations of space and time. We are the Universal Mind which manifests in human form. We have walked the planets of this Universe many times before, some of us, in others, as another in one of our many masks. We have tried to express our ineffable state in a variety of ways to ourselves and to our friends. We have danced, we have meditated, we have laughed, we have dreamed, we have sung, and we have written.In this Feb. 20, 2019, photo, Texas Education Commissioner Michael Williams, left, discusses the state's Teacher of the Year program, at the State Capitol in Austin, Texas.
