“HyperMotion Technology gives us even more flexibility in how we react and move the player on-screen. We can add new animations based on how the players really move and react in certain situations, which is really exciting,” said Ian Darke. “It opens up more possibilities in the games we are creating, and it is already improving our gameplay.”

Key Features : HyperMotion Technology. The most accurate

---

motion capture and physics engine in sports video games. The most accurate, physics-based animation system in any sports video game. HyperMotion makes running, sprinting, jumping and landing more realistic, and provides more responsive actions and reactions for players, both on and off the ball. More Real Player Movement. Off the ball physics were fully re-engineered, making the player more reactive and responsive to changing situations. Faster AI Responses. AI players automatically adjust to dynamic situations on the pitch, reacting to human players' moves as they

---

would, making the AI-controlled team more reactive, and the game more tactical and enjoyable.

**Improved Accuracy of Goalkeepers.** The goalkeeper's AI will react to human movements and react more intelligently when retrieving the ball.

**Improved Ball Trajectories.** The motion of the ball is more realistic and more accurate, with defined spin. There is more variation in the way the ball moves and how it bounces, and ball movement is more influenced by player movements.

**Improved Hit Indicators.** New hit indicators show where the ball will go when players collide, so

---

players will know where they will be heading when the ball contacts them. Improved Control in Dribbling. Dribbling is more responsive and there is more control over where the player starts the movement, as well as how it progresses. More Intuitive Player Controls. Player controls have been re-engineered to respond to player actions immediately, making the game feel easier to control. Players can easily time runs, take on players one on one and execute sliding tackles to make use of pitch space more effectively. Playmaking Ability. Players' moves and passes

---

have been made more intelligent, with a greater focus on creating space for teammates. Pivotal passes are more effective, with simpler passes allowing players to move into more advanced passing positions, opening up space for their teammates. More Dynamic, Contested Midfield Battles. Players move and act

### **Features Key:**

- DYNAMIC BOOT MODE
- NEW APPROACHES TO TOUCH GAIN
- PERSONAL CARGO
- TIME TRIAL
- BROADCAST REPLAYS
- SOCIAL FEATURES - Including Clubs
- FIFA GOAL TRAFFIC

## **System Requirements For Fifa 22:**

MMO Server: For some reason, Linux native MySQL support doesn't work in all SQL servers. Hopefully, this won't cause too much trouble. As of now, our database work has been done on Linux, but it is not expected to run on all SQL servers. However, we have a separate test environment we can use to ensure we don't have any issues, and that can be tested on any platform. If you're concerned, you can ask us on Discord to run the game in an alternative test environment if you like, but please bear in
